| B.Tech in Computer Science Engineering | 2020 – 2024 |

Personal Projects

- Learning Management System (LMS)  
Full-Stack Platform
  - Architected a scalable full-stack Learning Management System (LMS), implementing secure RESTful APIs and backend services with Object-Oriented Programming principles, demonstrating robust system design.
- QR Code-Based Attendance System  
Contactless Attendance System
  - Designed and deployed a robust QR code-based attendance system, implementing backend services with SQL database integration (PostgreSQL) and demonstrating API development for real-time tracking across 3 departments.

Experience

- Navadr Technologies  
Data Engineer  
Pune, India  
Oct 2024 – Present
  - Engineered scalable backend systems and RESTful APIs, processing over 500K daily records with principles transferable to Java 8+ and Spring Boot, achieving a 35% throughput improvement through optimization techniques.
  - Designed and optimized relational data models in PostgreSQL, reducing average query latency by 25% through index optimization and materialized views, demonstrating strong database design patterns.
  - Developed and deployed robust backend services following microservices architecture principles, reducing pipeline failures by 40% through automated data quality validation and schema enforcement, with containerization using Docker.

Technical Skills

Languages: Java 8+, Kotlin, Python, SQL, JavaScript, C++  
Frameworks & Tools: Spring Boot, Spring MVC, RESTful APIs, Microservices Architecture, Object-Oriented Programming (OOP), Design Patterns, PostgreSQL, MySQL, Maven, Gradle, Docker, Apache Kafka, RabbitMQ, FastAPI, Django, Node.js, Express.js, MongoDB, Firebase, Kubernetes, AWS, GitHub Actions, Jenkins, CI/CD, Git, GitHub, Agile, DSA, JWT, OAuth 2.0, React.js, Bootstrap
